Data CD Containing Tables in Microsoft® Excel® format, AutoCAD Coverage of Streetlights, GIS Geodatabase of Data Collected, Final Report and Reference Data

Section 1

Purpose and Scope

1.1 Purpose

The Town of Needham retained BETA Group, Inc. to correlate the number and location of the Town's existing street lights with the inventory and billing record provided by NStar Electric. This effort is intended to produce an accurate count of lights to be used by the Town in negotiating its Street Lighting Maintenance Contract, payments to NStar and potentially reducing overall electricity consumed. Part of the objective was to assess whether unnecessary or redundant lights can be eliminated.

1.2 Scope

The scope of work included identification and location of street lights located throughout Town including metered parking lots invoiced to the DPW. Locations did not include lights on other publicly owned facility sites (i.e. schools, RTS, PSAB, etc.). Data on unmetered (fixed fee) lights was compared to the monthly invoice prepared by NStar to evaluate count accuracy.

Upon completion of the inventory, BETA used criteria provided by the Town to identify unmetered candidate lights for removal. Criteria provided for light removal were lights were to remain at all intersections, significant bends, cul-de-sacs and every 400-500 feet along roadways.

Representative night time photos were taken throughout town to visually convey different lighting situations.

1.3 Information Provided

Provided by the Town and NStar were the following:

- NStar Unmetered Street Light Inventory spreadsheet dated 12/18/12 in Microsoft® Excel® format.
- NStar Invoice to Needham of Unmetered lights dated 5/21/12.
- NStar Invoices form 14 metered locations.
- Field Mark-ups from a previous streetlight inventory conducted by the Town.
- Previous GIS information of utility pole locations.

Section 2

Field Data Collection

2.1 Approach

BETA developed a street light and utility pole geodatabase using field data collected during February and March 2013. Data was collected by driving by each light and recording information using a laptop and ESRI® ArcMap™ 9.2 software. Poles were located by either using previous GIS utility pole locations or visually approximated. The following information was obtained for each light:

- Street name
- Owner
- Pole Type
- Light Type
- Pole Number

Information was gathered for each street light on traveled ways and parking lots specifically metered and invoiced to the DPW. Locations of each light collected are found in the map located in **Appendix E**.

Section 3

Data Analysis and Results

3.1 NStar Billing and Field Data Comparison

BETA began analysis with the provided NStar spreadsheet containing the pole and route number for each unmetered pole used for monthly billing. Using a series of Microsoft® Access® queries, a comparison was made between the NStar billing data and unmetered field data based on pole and route numbers. Private roads, parking lots, and metered pedestrian lights were not included in this analysis since these are metered lights invoiced separately. Lights that did not match were further reviewed manually to try and identify more matches for situations such as no pole number, wrong pole number in inventory, etc. Matches were made to the best of our ability, however; it was impossible to know exactly which invoiced light matched a field located light if neither had an associated pole or route number. **Table 3-1** notes the field data inventory.

Table 3-1: Total Field Inventory (Including Private Lights)			
Pole	Field Pole Type	Light Type	Number of Poles
Ornamental Light-1 Light	GAS	Ornamental 1	7
Utility Pole-1 Light	UP/LP1	Cobra	2,693
Utility Pole-1 Light	UP/LP1	Flood	13
Utility Pole-1 Light	UP/LP1	Square	2
Light Pole-1 Light	SL1	Cobra	126
Light Pole-1 Light	SL1	Round	8
Light Pole-1 Light	SL1	Square	143
Light Pole-2 Lights	SL2	Cobra	3
Light Pole-2 Lights	SL2	Flood	2
Light Pole-2 Lights	SL2	Square	29
Ornamental Light-1 Light	OLP1	Pedestrian 1	165
Ornamental Light-2 Lights	OLP2	Pedestrian 2	4
Total			3,195

The spreadsheet in **Appendix A** lists lights that matched the NStar billing of unmetered lights with the field data collection. **Appendix B** includes lights that were found in the field that were not in the NStar bill list. **Appendix C** includes lights that are listed in the NStar billing, but were not found in the field.

3.2 Unmetered Street Light Results

According to the data analysis, 2,751 lights were found to match the NStar billing record, 68 lights were located in the field that did not match the NStar billing and 106 lights were listed in the NStar bill records that were not found in the field. A total of 2,860 fixtures are included in the available NStar fixed fee invoice.

We could not reconcile a total of 38 fixtures which may be overbilled by NStar. Locations of these fixtures as well as privately billed lights can be found in **Appendix F**.

3.3 Pedestrian Light Analysis

In addition to unmetered data, BETA was given NStar bills for metered pedestrian street lights. With assistance of Town staff, BETA identified the metered pedestrian lights and updated the geodatadase accordingly, including billing account number where available. Locations of these lights are shown on the map in **Appendix E**.

3.4 Private Street Lights

The field inventory included streetlights on private roads or owned and maintained by entities other than the town of Needham. Some examples of this are MBTA lights at parking lots and T stations, private streets, gas lights on Mary Chilton Road, and Olin College. These lights were identified as such and are shown on the map in **Appendix E**.

3.5 NStar Circuit Maps

The intention of the Town was to identify the limits of each major electrical circuit to provide knowledge about power outage limits affecting street lighting. Circuit limits were requested several times from NStar and were not provided.

Section 4

Candidate Removal Lights and Electrical Cost Savings

4.1 NStar Billing and Field Data Comparison

Using the updated light GIS inventory, BETA located lights that could potentially be removed that met the following criteria provided by the town:

- Removal of unnecessary or redundant lights.
- Increasing spacing on residential streets to approximately 400 to 500 feet.
- Exceptions included lights at intersections, significant bends in roadways, and end of roadways (cul de sac/dead ends).

We did not look at metered lights for reduction.

431 (15.1%) of the lights have been identified as likely removal candidates and 241 (8.4%) of the lights have been identified as potential removal candidates. Out of the 2,860 invoiced fixtures, if we remove 38 for potential overbilling, 431 for redundancy and 241 for potential further reduction, a total of 24.8% of currently invoiced could be eliminated. The map located in **Appendix G** indicates potential light elimination locations.

It should be noted that each candidate removal light identified is intended to be a guide for potential areas and should be field verified and approved prior to removal.

4.2 Electrical Cost Savings

Table 4-1 below is a breakdown of electric bill cost savings with the removal of potentially overbilled and redundant lighting. These billing rates are based on NStar invoice # 213414 dated May 21, 2012. It is assumed that lights potentially removed are sodium fixtures emitting 4,000 lumens with a KWH usage of 16.47 per month and billed at a rate of \$0.04992 per KWH. The total electric bill savings per year is approximately \$7,000.

Table 4-1 Candidate Removal Potential Savings			
	No. of Lights	Annual KWH Usage	Annual Electrical Costs
Potential Overbilled	38	7,510.32	\$374.88
Likely Removal Candidates	431	85,182.84	\$4,252.33
Possible Removal Candidates	241	47,631.24	\$2,377.75
TOTAL	710	140,324.40	\$7,004.96

Section 5

Representative Nighttime Lighting Photographs

5.1 Photos Taken

BETA staff took representative photographs at multiple locations in Town to help illustrate various lighting levels provided by street lights. Photos were taken on a clear night April 6, 2013 between 8:00 PM and 9:00 PM. **Appendix D** includes these photos with the location captioned.
